Subject: Update on Chemours' new Altamira, Mexico TiO<sub>2</sub> Production Line

Dear Valued Customer,

We are excited to announce that the new titanium dioxide production line at our Altamira, Mexico facility commenced operations in mid-2016. This state-of-the-art production facility will be equipped to produce Ti-Pure™ grades for Plastics, starting with R-104 and R-105 with other plastics grades planned in the future. The addition of this new asset will allow Chemours to support your growth with greater supply reliability. In order for you to take advantage of the greater supply reliability, we would ask that you initiate the qualification process for R-105 immediately.

Altamira-produced Ti-Pure™ R-105 is available for qualification. We will be in touch with you to discuss your requirements for qualification.

If you have any further questions or need further details, please engage your sales and/or technical marketing representatives. We would like to express our appreciation of your confidence in our products and thanks for your continued business.

Sincerely,

A handwritten signature in black ink, appearing to read 'Rajath Mudalamane', with a stylized flourish at the end.
